Across city streets and remote highways, metro corridors and hospital wings, something quiet yet powerful watches over us. A digital protector. A tireless eye. A CCTV camera: not just recording, but now evolving into something far greater.

Because in a world where cyber intrusions threaten more than physical breaches, the camera must become a guardian of both space and data. And here, **CP PLUS** - India's most trusted surveillance brand - is leading the surveillance industry.

By delivering **the largest range of STQC-certified IP surveillance systems in India**, CP PLUS is not just setting a benchmark, but redefining what national security looks like in the 21st century.

More Than a Camera. A Cyber-Fortified Guardian.

It's no longer enough for cameras to simply capture what happens. They must **defend** what they record. They must resist tampering. Protect data integrity. Remain immune to silent hacks and unseen hands.

STQC certification, awarded by the Government of India's Standardisation Testing and Quality Certification Directorate, is that line of defense. It signifies that a product has passed rigorous checks for cyber safety, encryption, hardware reliability, and trusted architecture. It is a seal of

national assurance - a declaration that a surveillance system is secure, reliable, and ready to be deployed where safety matters most.

From police stations and control rooms to metro stations and smart highways and now even homes, STQC certification is now the gold standard, and **CP PLUS is leading the country with the widest, most advanced range of these certified systems.**

When Surveillance Becomes Digital Sovereignty

The threats we face today are no longer just physical. As India expands its digital footprint through initiatives like Digital India, Smart Cities, and integrated governance, **cybersecurity becomes mission-critical.**

A hacked camera feed in a school, a compromised video stream from a toll plaza, or leaked footage from a government building isn't just a breach. It's a crisis. And it's one the country can't afford.

That's why CP PLUS's initiative to develop and deliver a vast portfolio of **STQC-certified IP surveillance systems** is more than business strategy; it's imperative to strengthening the **national security infrastructure.**

Built to Protect: How CP PLUS Cameras Go Beyond the Ordinary

Every certified system from CP PLUS is engineered with advanced digital safeguards:

- **Secure Boot Protocol:** Ensures no unauthorized software is loaded during startup.
- **Trusted Components:** Only verified, traceable, and vetted parts - hardware and software - go into each unit.
- **End-to-End Encryption:** Even if intercepted, the video data remains useless without the encryption keys.
- **Full Cybersecurity Compliance:** Meets the highest government standards for surveillance in critical zones.

This isn't surveillance as we've known it. This is surveillance that anticipates attack, deflects danger, and preserves truth.

Made in Bharat, Made for Bharat

What adds a deeper layer of pride is this: every STQC-certified system from CP PLUS is **conceived, engineered, and manufactured in India**, at the company's advanced production hub in Kadapa, Andhra Pradesh.

This is **Make in India** in its truest, most strategic form. Not just assembling cameras, but creating sovereign surveillance technology that understands Indian terrain, power variability, and bandwidth constraints - while still meeting global standards of cyber integrity.

Where Trust Is Deployed

These certified systems are already transforming security infrastructure across the nation:

- **Safe City Projects** in Tier 1 and Tier 2 cities
- **Traffic management systems and toll booths** across highways
- **Airports, metros, and critical transportation hubs**
- **Police control rooms and state command centers**
- **Government offices, schools, retail zones, and residential societies**

In a landscape where government contracts now require STQC-certified systems as a compliance necessity, **CP PLUS emerges not just as a supplier but as the go-to partner for assured security.**

The Future Is Watching. And It's Protected.

We live in a time when every byte of data matters. Every frame of footage holds potential evidence, accountability, and insight. But only if it can be trusted.

By pioneering the **widest STQC-certified surveillance product line in the country**, CP PLUS is ensuring that trust is never compromised. That India's security eyes are not only open, but fortified - by purpose, by innovation, and by national pride.
